Education

Netaji Subhas University of Technology — Dwarka, Delhi
Bachelor of Technology in Electronics and Communications — *Aug. 2024 – 2028*

Experience

Bharti Airtel Limited — June 2026 – Aug. 2026
Software Engineer Intern — *Gurugram, India*

- Built a **LangChain text-to-SQL agent** over the production VM database for on-call engineers, scoped to a **read-only** role and wrapped in **NeMo Guardrails** input/output rails, served over a REST API on self-hosted **Ollama** with **Vertex AI** for heavier queries.
- Re-architected the data layer of the internal OpenStack platform behind it; cut dashboard query latency by **30%** with **composite indexes** and **cursor-based pagination**.

SmartOut Media (Canada) — Jan. 2026 – Present
Software Engineer (Contract) — *Remote*

- Rebuilt the iOS app from scratch (**50K+ install** product). Traced live production issues from **Crashlytics** reports through the network layer to the underlying query, and fixed them end to end.

Projects

JobOSS | *TypeScript, Node.js, PostgreSQL, Prisma, pg-boss, Zod, Next.js, Claude Code* — Sep. 2026 – Present

- A hiring-research and outreach pipeline over **180+ startups** (Greenhouse, Lever and Ashby boards). Its LLM step is a **Claude Code session** that holds **shell, file and database access**, so I designed the system around governing that agent.
- Every outbound request passes **one policy gate** (host allow/deny list, robots.txt, rate limits); an **AST guard** and a policy test prove no HTTP client is reachable outside it. Scraped pages are **screened for prompt injection at ingestion**, so hostile text never becomes evidence the agent can quote.
- Nothing sends without a human: approval freezes an **approval hash** compared byte-for-byte, and one **send gate checks 11 conditions in a single transaction**, recording a **reason code** for every refusal. Each generated claim must **cite a stored evidence row**; secrets are **envelope-encrypted** and proven never to reach logs (**64 test files in CI**).

KilnWatch | *Python, Amazon Bedrock, AWS Lambda, PostgreSQL/PostGIS, Terraform, Swift* — Oct. 2026

- Co-built a system that turns **satellite detections** of brick kilns into **field inspections**: an app for district inspectors, a portal for residents, and an **AWS backend** sharing one registry. I built the app, the **AI agents**, and the integration between them.
- Agents get **least privilege**: the Q&A agent has six **read-only tools** and at most **4 rounds** × **3 calls**; the triage agent can only add a **pending item to a human review queue**. Only an inspector can record a verdict, and the database writer role **cannot DELETE**.
- **Code checks every answer** before it leaves: each cited ID must come from this request's tool results, else **one retry**, then a **labelled fallback**. Per-request **traces** log counts only (a test proves no user text leaks), and cost caps **fail closed**. Shipped through **56 phased Claude Code prompts** with separate build and review passes (**238 backend tests**).

Saldo | *Swift, Core ML, Foundation Models, Kotlin, Gemini (Firebase AI Logic)* — 2026

- A personal-finance app for students that won the **Apple Swift Student Challenge 2026**: the iOS app scans receipts with **VisionKit OCR** and analyses spending with a **Core ML model I trained** and Apple's **on-device LLM**.
- Scaled it to **Android** with a bank-SMS **rule engine** (13 parser defects fixed, 57 tests); only messages the rules can't parse go to **Gemini**, with **personal data redacted** on device and requests gated by **App Check**.

Achievements

- **Apple Swift Student Challenge Winner (2026)** for Saldo; **1st of 200+ teams, MLH Brainwave 2.0** (Best Overall, Best Use of Gemini) with AquaSense; **2x Winner, HackonHills (2024, 2025)**.
- **HackerRank Orchestrate (Sept. 2026): top 60 of 3,000+**, building an AI financial agent in **24 hours**.

Technical Writing

The Smog Has an Address | *AWS Builder Center* — 11 Oct. 2026

- How KilnWatch works end to end: geospatial evidence, AWS services, **AI assistance**, and the line between **model signals and human decisions**.

Technical Skills

Languages: Python, TypeScript/JavaScript, SQL, Swift, Kotlin
Agent Safety: tool scoping, policy gates, human-in-the-loop approval, prompt-injection screening, output validation, agent traces, audit logs
Coding Agents: Claude Code (MCP connectors, plugins, hooks, skills), Codex, Cursor
Models & Frameworks: Amazon Bedrock, Claude, Gemini, Foundation Models, LangChain, NeMo Guardrails, Ollama
Backend & Infra: Node.js, FastAPI, PostgreSQL/PostGIS, job queues, AWS (Lambda, RDS, IAM), Terraform, GitHub Actions
